Healthy Water for the Modern World

Contaminant-free, healthy, great-tasting water has never been more necessary than it is today. As our exposure to environmental pollutants increases, so does our need for increased intake of pure, healthy water.

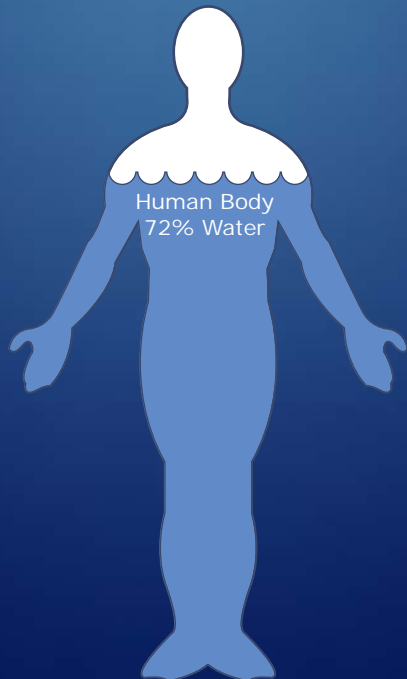

Water is our body's only way of purifying itself and flushing out toxins.

Water is the key factor in digestion, nutrient absorption, temperature control, skin hydration, energy production, joint lubrication and virtually every process that happens inside our bodies.

Once we realize that our bodies are more than 70% water, it's easy to understand why water quality is so important. Health and longevity depend on proper hydration and detoxification.

The amount of water we drink and the quality of our water to a large extent determine our level of health.

All over the world, wherever you find the healthiest water...you find the healthiest people.

The healthiest water on Earth  
Doesn't come in a bottle...  
Doesn't come from the tap...  
It comes from quality in-home  
water filtration.

MSRP \$124.99

The #1 rated aquasana™ Drinking Water Enhancement System can be easily installed on the countertop as shown, or under the sink with the optional adapter kit.

No other home water filtration system has ever produced better results!

Contaminant reduction ability has been determined by independent laboratory testing and certified by the California Department of Health Services, Water Treatment Device Program. The California Department of Health Services is the most stringent regulatory agency in the U.S. for water filtration products.

All accessories, replacement cartridges, performance data and product certifications are available online at [www.aquasana.com](http://www.aquasana.com).

Advanced dual-filter submicron process filters out contaminants and leaves in the natural trace minerals.

- Filter cartridges last 6 months/500 gallons
- Average replacement cost is \$48
- That's only 9.6¢ a gallon!

The AQ-4000 Filters Out:  
Chlorine, Lead, THMs, PCBs, VOCs, MTBE,
