Aquasana's exclusive dual filter system uses a combination of carbon filtration, ion-exchange and sub-micron filtration to produce truly healthy, great tasting water, conveniently from your kitchen tap.

THE "A" CARTRIDGE filters out chlorine and turbidity, the 2 most concentrated and competitive contaminants in tap water. This allows the following stages in cartridge "B" to focus on the more difficult contaminants like lead, VOCs, THMs and synthetic chemicals.

THE "B" CARTRIDGE is where the final stages of filtration take place. Lead is reduced by a complex ion-exchange process that replaces harmful lead ions with healthful potassium ions. Next is the most challenging and possibly the most important stage, the adsorption of synthetic chemicals like herbicides, pesticides and industrial solvents. The "B" cartridge is a 0.5 micron absolute filter that is effective for the removal of chlorine resistant organisms and cysts like Cryptosporidium and Giardia.

Filter cartridges last for 500 gallons and should be replaced every 6 months.
Item #AQ-4025 Cost \$59.99 (\$48.00 on the Auto-Ship Program).

It's like having natural spring water on tap for only 2¢ a bottle!
